Yikes. I don't know much in this regard.  
Patti-Kay ot Vicki, do you?

What about RCRA? Paul?

I am guessing there are no regs....but I don't know? Sort of reminds me of how freight trains can carry one car with nasty chemicals, the next with furniture, another with paper products, etc, etc....unless something changed.

CDC Administrator would like to better understand the regs (WV or federal) for facilities storing chemicals in proximity to surface water bodies that are public drinking water sources. I think you all were discussing some of EPA's authorities relevant for Freedom Industries today, but I don't remember if any of those were specific to siting of the storage tanks and frankly I didn't pay close enough attention. Any guidance or talking points you have on this already would be hugely appreciated. This is for internal agency use (just for his understanding).

Lora
